

# Gym Website Project Description

## Short Description:

This project is a responsive Gym Website built using raw HTML and Tailwind CSS. The website is designed to showcase gym services, fitness plans, trainers, and subscription options in an attractive and modern layout. It includes multiple sections such as a hero banner, fitness plans, trainers, subscription plans, and a detailed footer. The design focuses on providing a professional look with smooth transitions, hover effects, and a mobile-friendly navigation menu.

## Technologies Used:

- HTML5 – for structuring the website content.
- Tailwind CSS – for styling and creating a responsive layout.
- Font Awesome & Google Icons – for adding visual icons.
- JavaScript – for implementing mobile navigation functionality.

## Challenges Faced:

One of the main challenges in building this project was managing the responsive layout using Tailwind CSS utility classes. Ensuring that all sections aligned correctly across different screen sizes required careful use of grid and flex utilities. Another challenge was implementing the mobile navigation toggle with smooth transition effects using JavaScript.
